An Assessment of the Health Status of the Health Populations in Wyoming

Erratta (January 8, 2002)

Table 1, page 7,

Asian/P.I. 1990 population should be 2622, which results in a change of +11.9%

For clarification the note at the bottom of the table should read:

*Multiple race individuals included in 'other' group for 1st time in 2000, resulting in large percentage increase.

Table 1: Wyoming Minority Populations in 1990 & 2000			
Race/Ethnic Group	1990	2000	Change
Non-Hispanic White	412,711	438,799	+6.3%
Hispanic	25,751	31,669	+23.0%
African American	3,426	3,504	+2.3%
Native American	8,857	10,238	+15.6%
Asian/P.I.	2,622	2,934	+11.9%
Other	221	6,638	*
Total	453,588	493,782	+8.9%
Total Minority	40,877	54,983	+34.5%

^{*}Multiple race individuals included in 'other' group for 1st time in 2000, resulting in large percentage increase.

Page 13, Box 3: Leading Causes of Death

The following should be added after the table:

Note: Hispanics are not listed separately by this data source

Page 27, Box 28: Breast Cancer Screening

The following should be added after the table:

Note: Due to the small sample size, there is no Wyoming data for the African American and Asian/Pacific Islander.

Page 27, Box 28: Breast Cancer Screening

The following should be added after the table:

Note: For the time period 97-99, BRFSS data indicate Wyoming minority women are receiving mammograms at rates close to the national average, and American Indian and Hispanic women may even be screening at rates higher than their national counterparts. Again, these percents are based on very small numbers and therefore must be viewed with caution.

Page 31

The paragraph titled "Hispanics" should be replaced with the following:

<u>Hispanics</u>: In Wyoming, Hispanics have somewhat worse than average rates of infant mortality, unintentional injury mortality, motor vehicle accident mortality, diabetes mortality, liver disease mortality, births to 15 to 19 year olds, prenatal care, adult cigarette use, adult binge drinking, self-reported poor health status, incidence of tuberculosis, incidence of chlamydia, and incidence of gonorrhea (Table 6).

Page 32, Table 6

Diabetes Mortality for Hispanics should have one star (*).

STD (Gonorrhea) for Hispanics should have one star (*)
